Figure 1: A 24x5 grid representing a 24-hour period across five days. The grid is divided into five horizontal sections, each representing a day. The columns are numbered 1 to 24. The rows are labeled with letters A, C, D, E, and G. The grid contains various colored circles and squares representing different data points. The colors are green, orange, black, white, red, and grey. The shapes are circles and squares. The grid is used to show the distribution of data points over time and across days.
